

A **good** way to hide from predators is to use a disguise. Many bugs and insects do this very **well**.

Which boldfaced word tells more about a noun? \_\_\_\_\_

Which boldfaced word tells more about a verb? \_\_\_\_\_

**Good** is an adjective. Use it to describe a noun. **Well** is an adverb. Use it to tell more about a verb. You can also use *well* as an adjective to mean "healthy."  **Remember to use this information when you speak, too.**

See Handbook Section 29

## Part 1

Circle the correct words in parentheses. (1–13)

Studying insects is a (good/well) hobby for a curious person. I have many (good/well) books about insects. I know these books very (good/well). My favorite book describes the habits of butterflies. Insect camouflage is another topic I have studied (good/well). Here are a few of the facts I've learned.

The Kallima butterfly of India has developed a very (good/well) disguise. Its folded wings look like dead leaves; this camouflage hides it (good/well) from enemies when it rests on a tree. The walking stick and the inchworm also disguise themselves (good/well). These insects are (good/well) at blending into wooded areas because they look like twigs.

The viceroy butterfly makes a (good/well) meal for a bird, but eating the monarch butterfly can make a bird sick. Because these butterflies look alike, birds leave them both alone. This trick of mimicking another insect also works (good/well) for the flower fly, which looks like a bee. Predators who know how (good/well) the bee protects itself stay away from both insects.

White or yellow flowers are (good/well) places for crab spiders to hide. These spiders can slowly change color to match the flower they're on. Then predators cannot see them very (good/well).

**The flower fly fools predators who mistake it for a bee.**
